Le cas des tsunamis et des séismes

Sébastien Guenneau

Chargé de recherche au CNRS,
Institut Fresnel (CNRS/Aix-Marseille
Université/Ecole centrale de Marseille)

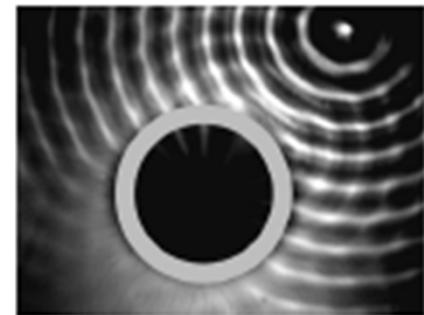

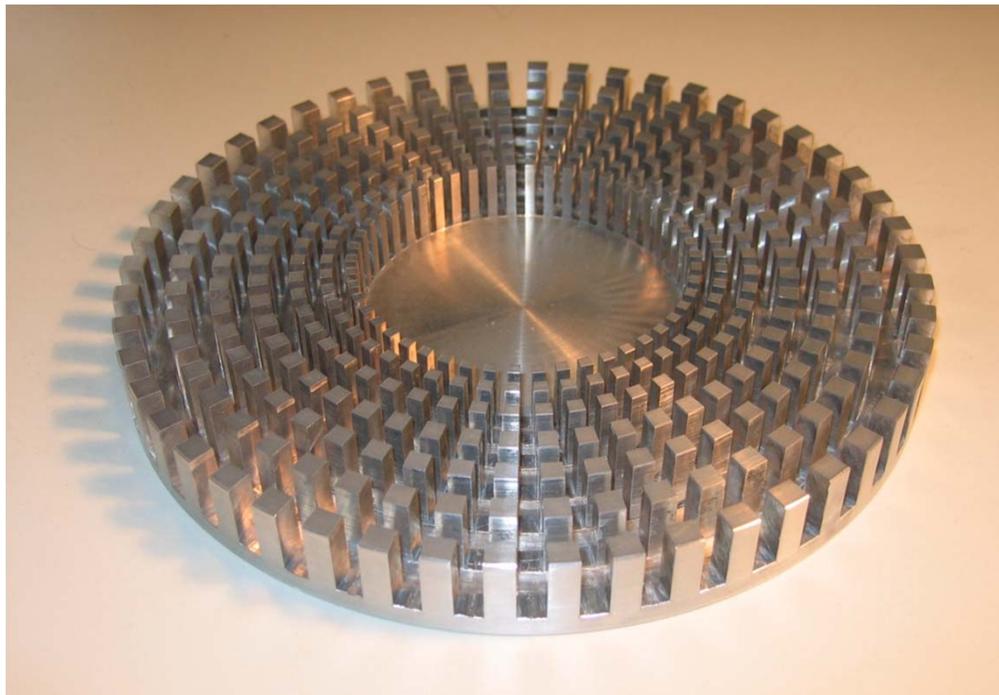

Collaborations

- Laboratoire de mécanique et d'acoustique (CNRS, Marseille)
- Institut Langevin (CNRS/ESPCI/UPMC/Univ. Paris 7)
- Imperial College London (Royaume-Uni)
- Liverpool University (Royaume-Uni)
- Sydney University (Australie)
- Austin University (USA)
- Indian Institute of Technology Kanpur (Inde)

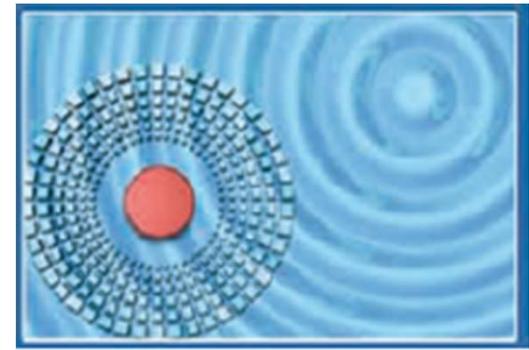

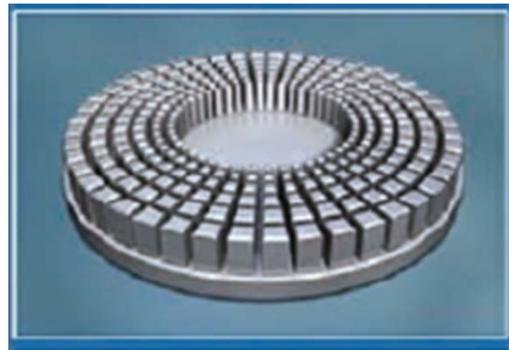

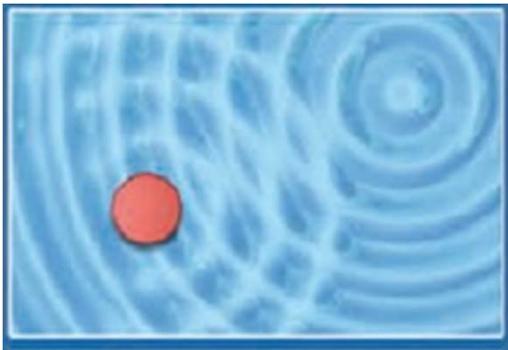

Petite échelle (20 cm) Cape à vagues

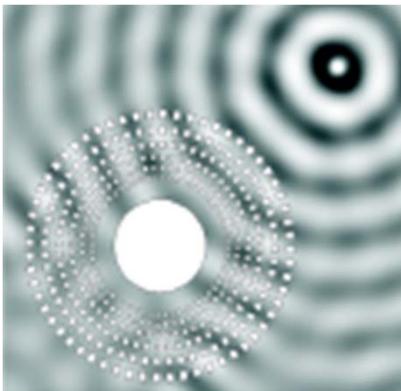

Physical Review Letters 101, 134501 (2008)

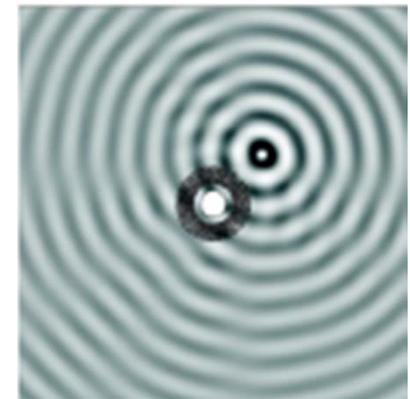

Grande échelle (200 m) Cape anti-tsunamis

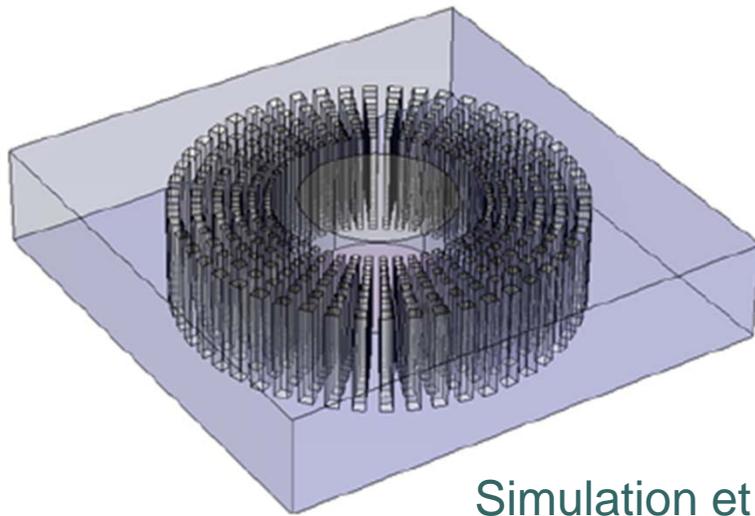

Infographie La Recherche (Février 2012)

Simulation et design:
Institut Fresnel

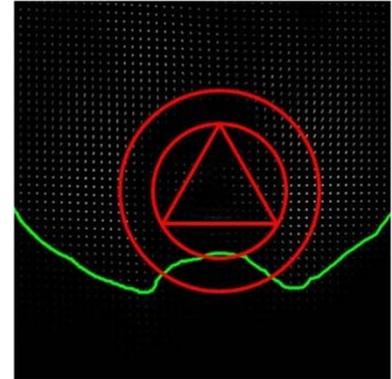

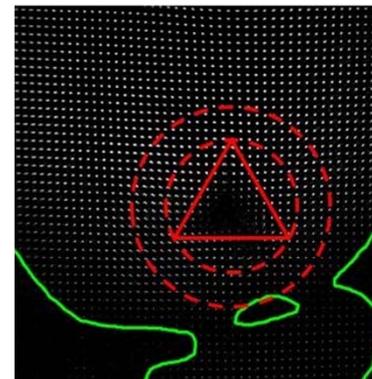

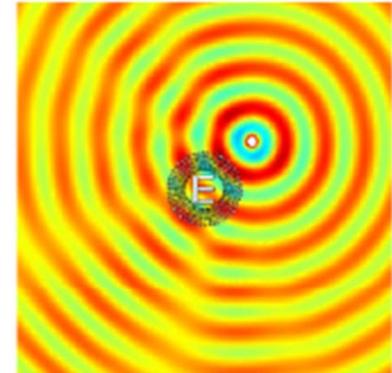

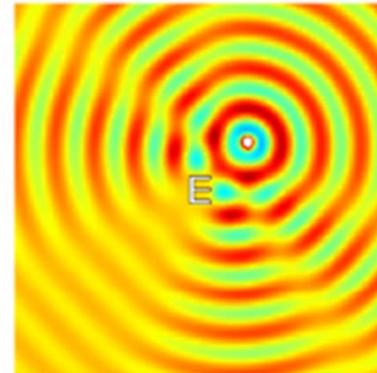

Petite échelle (10 cm) Cape anti-vibrations

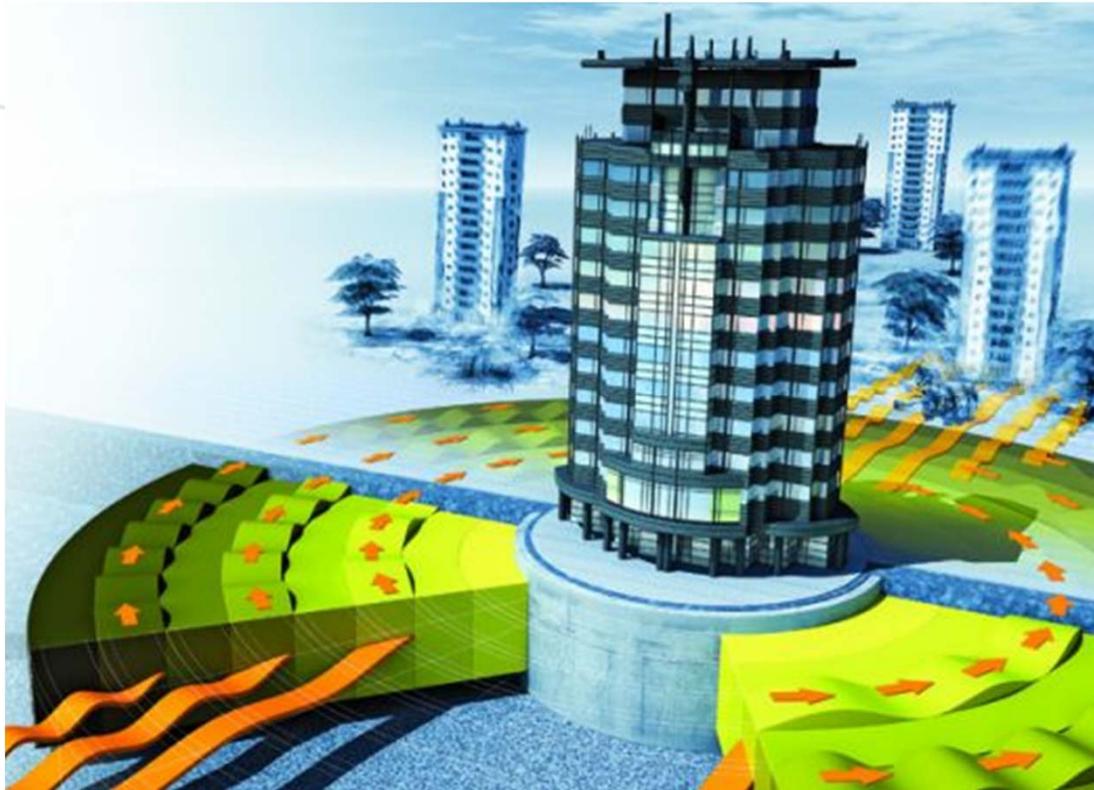

Simulation et design:
Institut Fresnel

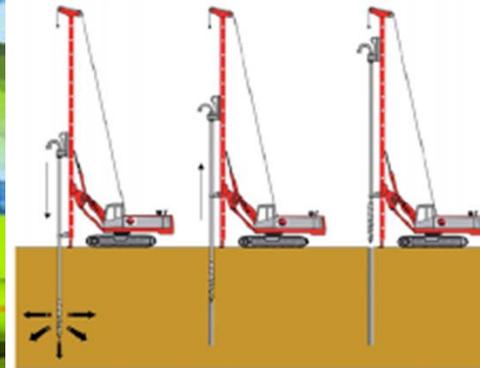

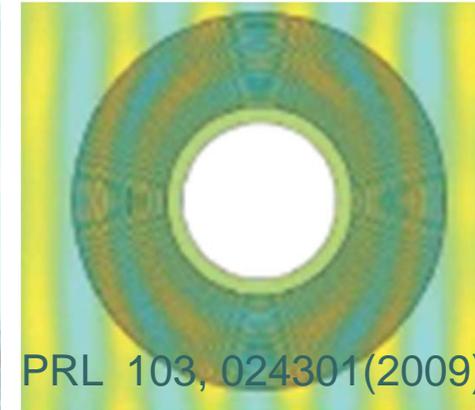

Validation expérimentale:
Nicolas Vandenberghe (IRPHE)

Grande échelle (200m): Cape anti-séismes

Infographie Popular Science Magazine (2009)

Infographie Ménard

Brevets et publications

- 3 brevets, dont un sur des systèmes anti-vibratoires embarqués
- 100 publications scientifiques, dont 40 sur l'invisibilité
- 2 ouvrages scientifiques, dont un sur les métamatériaux acoustiques
- 10 chapitres de livre
